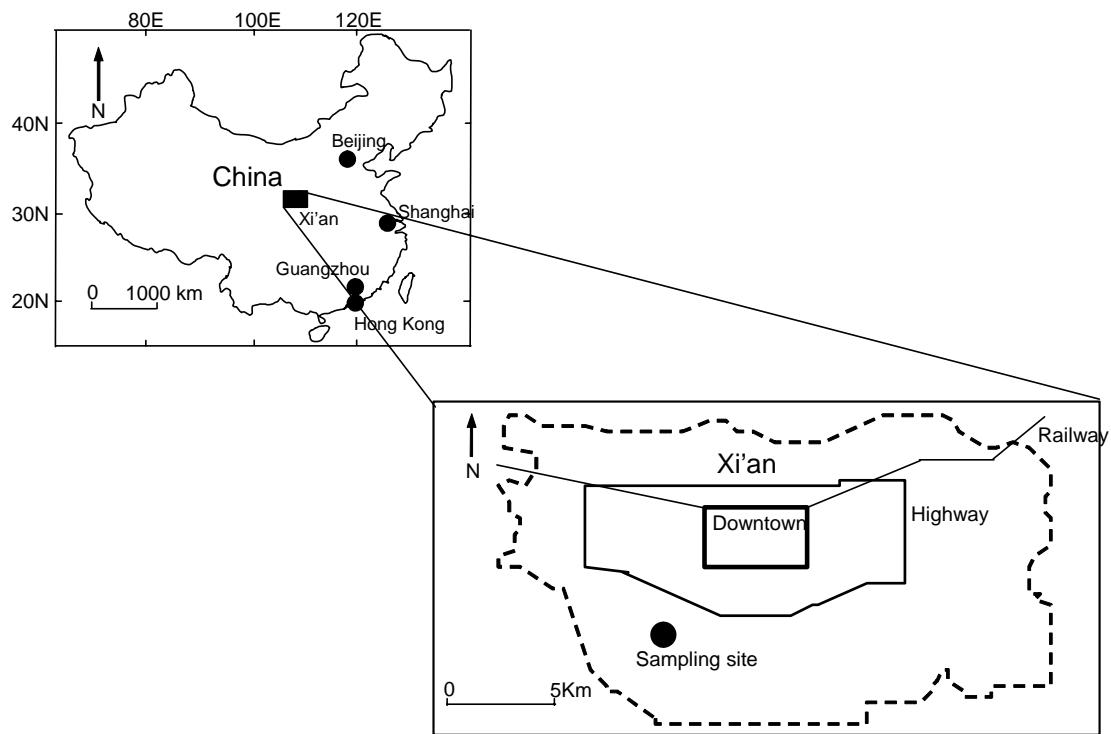

Figure 1. Location of sampling site of PM_{2.5} in Xi'an. The study area is within the dotted line.

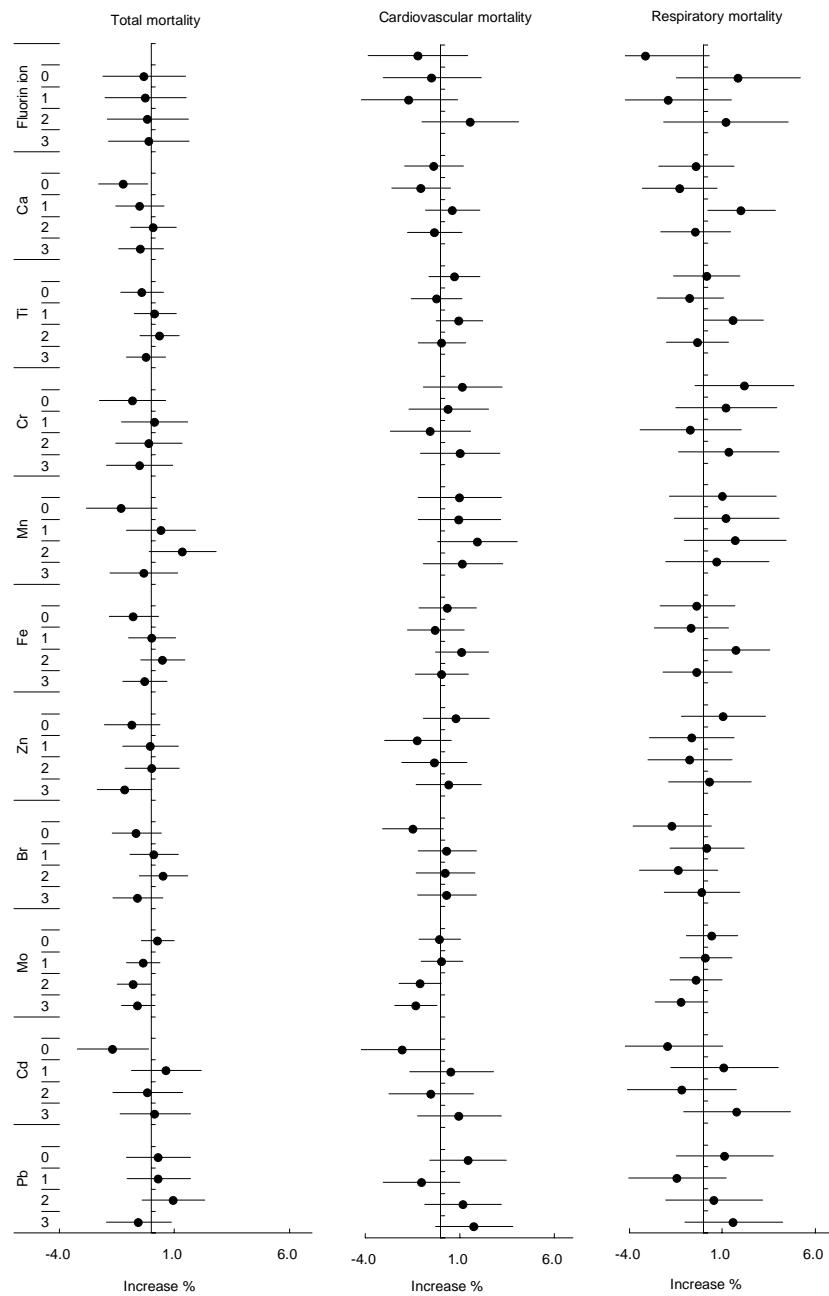

Figure 2. Estimated percent increase [mean (95% CI)] in mortality per IQR

increase in pollutant concentrations on the current day (lag 0) or the previous 1-3 days (lags 1, 2 and 3), adjusted for temporal trend, day of the week, temperature, relative humidity, and SO_2 and NO_2 concentrations

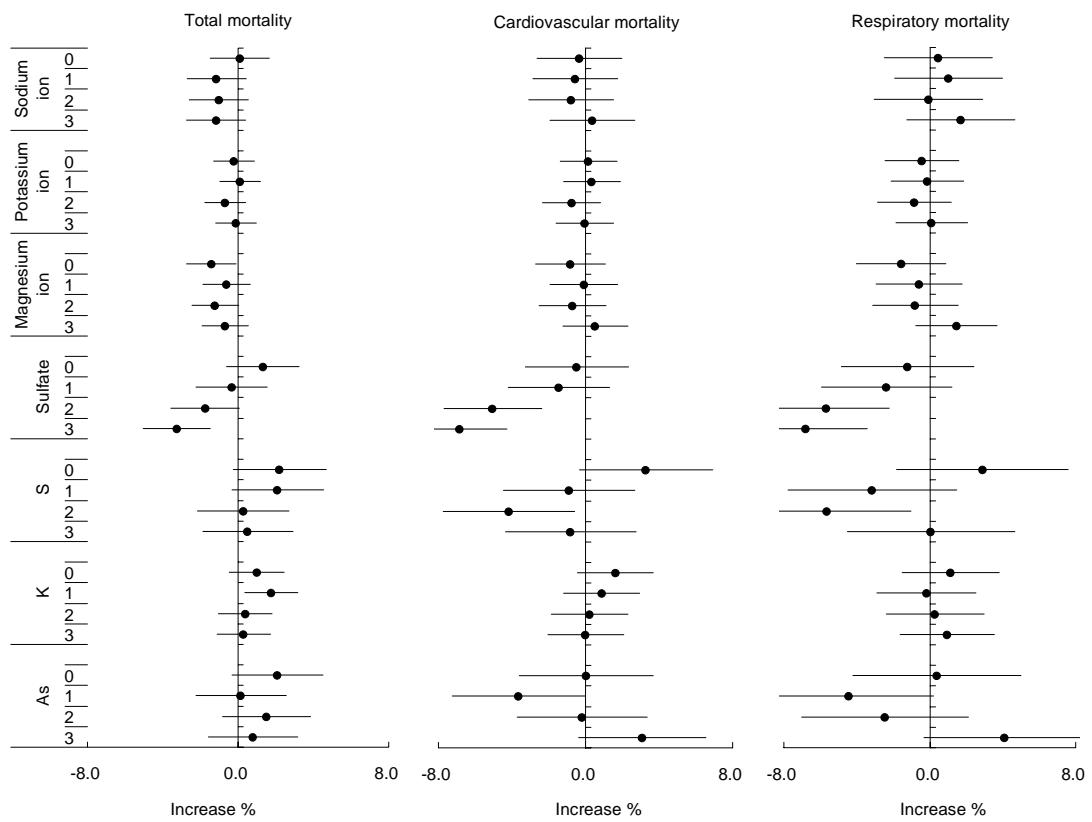

Figure 3. Estimated percent increase [mean (95% CI)] in mortality per IQR increase in pollutant concentrations on the current day (lag 0) or the previous 1-3 days (lags 1, 2 and 3), adjusted for PM_{2.5} mass, temporal trend, day of the week, temperature, relative humidity, and SO₂ and NO₂ concentrations

Table 1. Correlations among PM_{2.5} mass and selected constituents
